# BUNDELKHAND INSTITUTE OF ENGINEERING AND TECHNOLOGY

## Department of Information Technology

## Certificate

Certified that this is a bona fide record of the Project Entitled “**Online Crime File**” Completed successfully by **Achala Bhati (1004313001)**, **Anvi Jain(1004313007)**, **Khyati(1004313017)** and **Megha Gupta(1004313021)** of the 5<sup>th</sup> semester, Information Technology, under the guidance of Respected faculties in the Partial fulfilment of the requirements to the award of Degree of Bachelor of Technology in Information Technology from “BUNDELKHAND INSTITUTE OF ENGINEERING & TECHNOLOGY” during the Academic year 2012-13.

**Verified by:**

.....

**Prof. Yashpal Singh**

**(Department of Information Technology)**

## **Acknowledgement**

We are deeply indebted to our respected Head of the Department **Dr. Yashpal Singh** for guiding us .

Our sincerest thanks to all our teachers, seniors and colleagues whose help and guidance brought this project to successful completion.

**Achala Bhati(1004313001)**

**Anvi Jain(1004313007)**

**Khyati (1004313017)**

**Megha Gupta(1004313021)**

# **INTRODUCTION**

## **1.1 Purpose**

In today's fast paced world where everything is getting where everything is getting modernized, requirements of people, their way of living and demands are changing, we require to form a system to match up to their expectations. And in that case, our project is a step to help the citizens and to provide them with services at their ease.

With the increase in crime and corruption, this website, could actually offer an opportunity where citizens can register any information for police and also alert them about their complaints without visiting the police stations. We can also provide them with the information of the cases and crimes taking place in the city and make them aware of their surroundings.

A visitor to our website can have a look at the news gallery, gallantry awards, criminal records, helpline numbers etc provided for the general public for their safety and use. However to lodge a complaint, a person must register on our site. He will be provided with a unique member id and then he can file his complaint. A case will be assigned to an officer by the administration and that information will be provided to the user. A user can login and check the status of his/her case as and when required.

On the other hand, the administrator will have access to the whole website. He can view all the databases and make changes to them accordingly. He will be the topmost authority handling and managing the crimes online and distributing as well as altering the duties.

## **1.2 Scope**

- This website provides an architectural overview of the Online police management system.
- This website is generic, web based tool that enables citizens of Jhansi to file case online and use various services provided by the Police Administration
  - It provides interactive functionality.
  - Information will be stored in database.
  - Administrative function will also be provided for managing cases and database.

## **1.3 Definition, Acronyms and Abbreviation**

- 1 HTML (Hyper Text Mark-up Language): It is used to create static web pages.
- 2 JSP (Java Server Pages): It is used to create dynamic web content.
- 3 J2EE (Java 2 Enterprise Edition): It is a programming platform, belonging to the Java platform, which is used for developing and running distributed java applications.

- 4 Apache Tomcat: It is an application server that runs and supports the J2EE and the web service applications.
- 5 HTTP (Hyper Text Transfer Protocol): It is a transaction oriented client/server protocol between a web browser and a web server.

## 1.4 Technology Used

- **J2EE:** (Servlet, JSP, JAXP, Java Beans) Application architecture.
- **JAVA:** Application architecture.
- **APACHE TOMCAT:** Web Server
- **ORACLE:** Database Management System
- **HTML (Hyper Text Markup Language):** To create static web pages.
- **CSS (Cascade Style Sheet):** Formatting Web Page
- **JAVASCRIPT:** Field Validation
- **Localization:** Language – English

## 1.5 Requirement Specification

### Software Specification

DEVELOPER SIDE	
Operating System	Windows
Application System	Apache Tomcat
Data Base	Oracle 10g
Programming Language	JSP

CLIENT SIDE	
Operating System	Any

Web Browser	Any
-------------	-----

SERVER SIDE	
Operating System	Any
Web Server	Apache Tomcat

### Hardware Specification

DEVELOPER SIDE	
Intel p4 or equivalent	2 GB

CLIENT SIDE	
Intel p4 or equivalent	2 GB

SERVER SIDE	
Server Environment Capable Hardware	As per the Size of the required Data base

# OVERALL DESCRIPTION

## 2.1 Project Perspective

### Visitors interface:

Visitor is any unregistered citizen who visits the website. He/she can avail the basic facilities such as viewing helpline numbers, see missing and most wanted person and other facilities provided in citizen interest and the most important is RTI(Right To Information).

### Member interface:

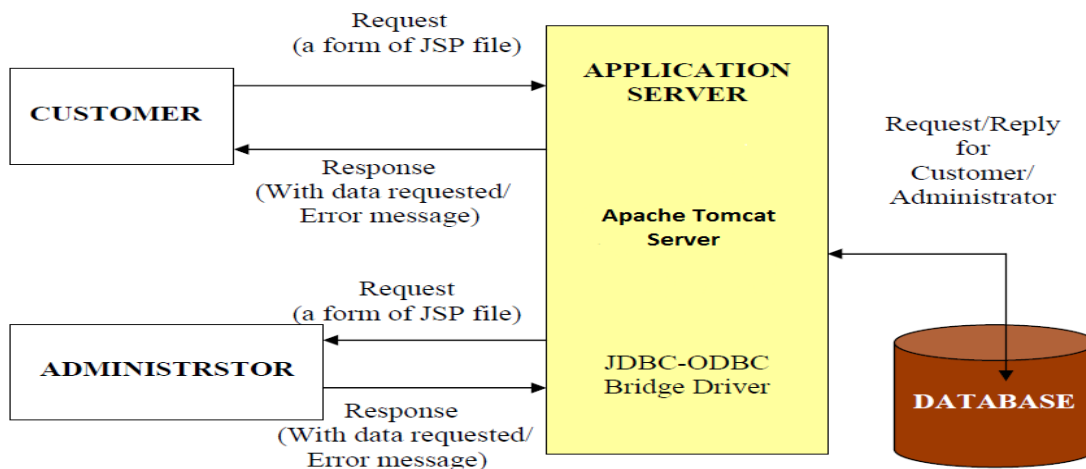

Member is a registered citizen. Member can file a criminal and civil case. He/she can also check his case status and pay any pending challan against him/her.

### Officer interface:

This module has been developed for the police officials who can see the case assigned to them and know the specific details of the case. They can also change the case status as the case is being solved or the file for a particular case is closed and can also access the criminal module and make necessary updates in it.

### Administrator interface:

The administrator will have an administrative interface which is a GUI so that he can view the entire system. He will also have a login page where he can enter the login particulars so that he can perform all his actions. This administrative interface provides different environment such that he can maintain database & provide backups for the information in the database. He can register the new officers by providing them with username, password & by creating account in the database.

## 2.2 Users of the system

In this Jhansi police website system, the users are:

1. Visitor
2. Member
3. Police Officials
4. Administrator

### 1. Visitor:

The visitor can view missing persons, person found, news, citizen charter, contact us, helpline number, safety measures and general announcement and avail benefits of RTI and he can also register himself to become a registered member.

### 2. Member:

Member can file a new case and also check the status of the filed case.

### 3. Police Official:

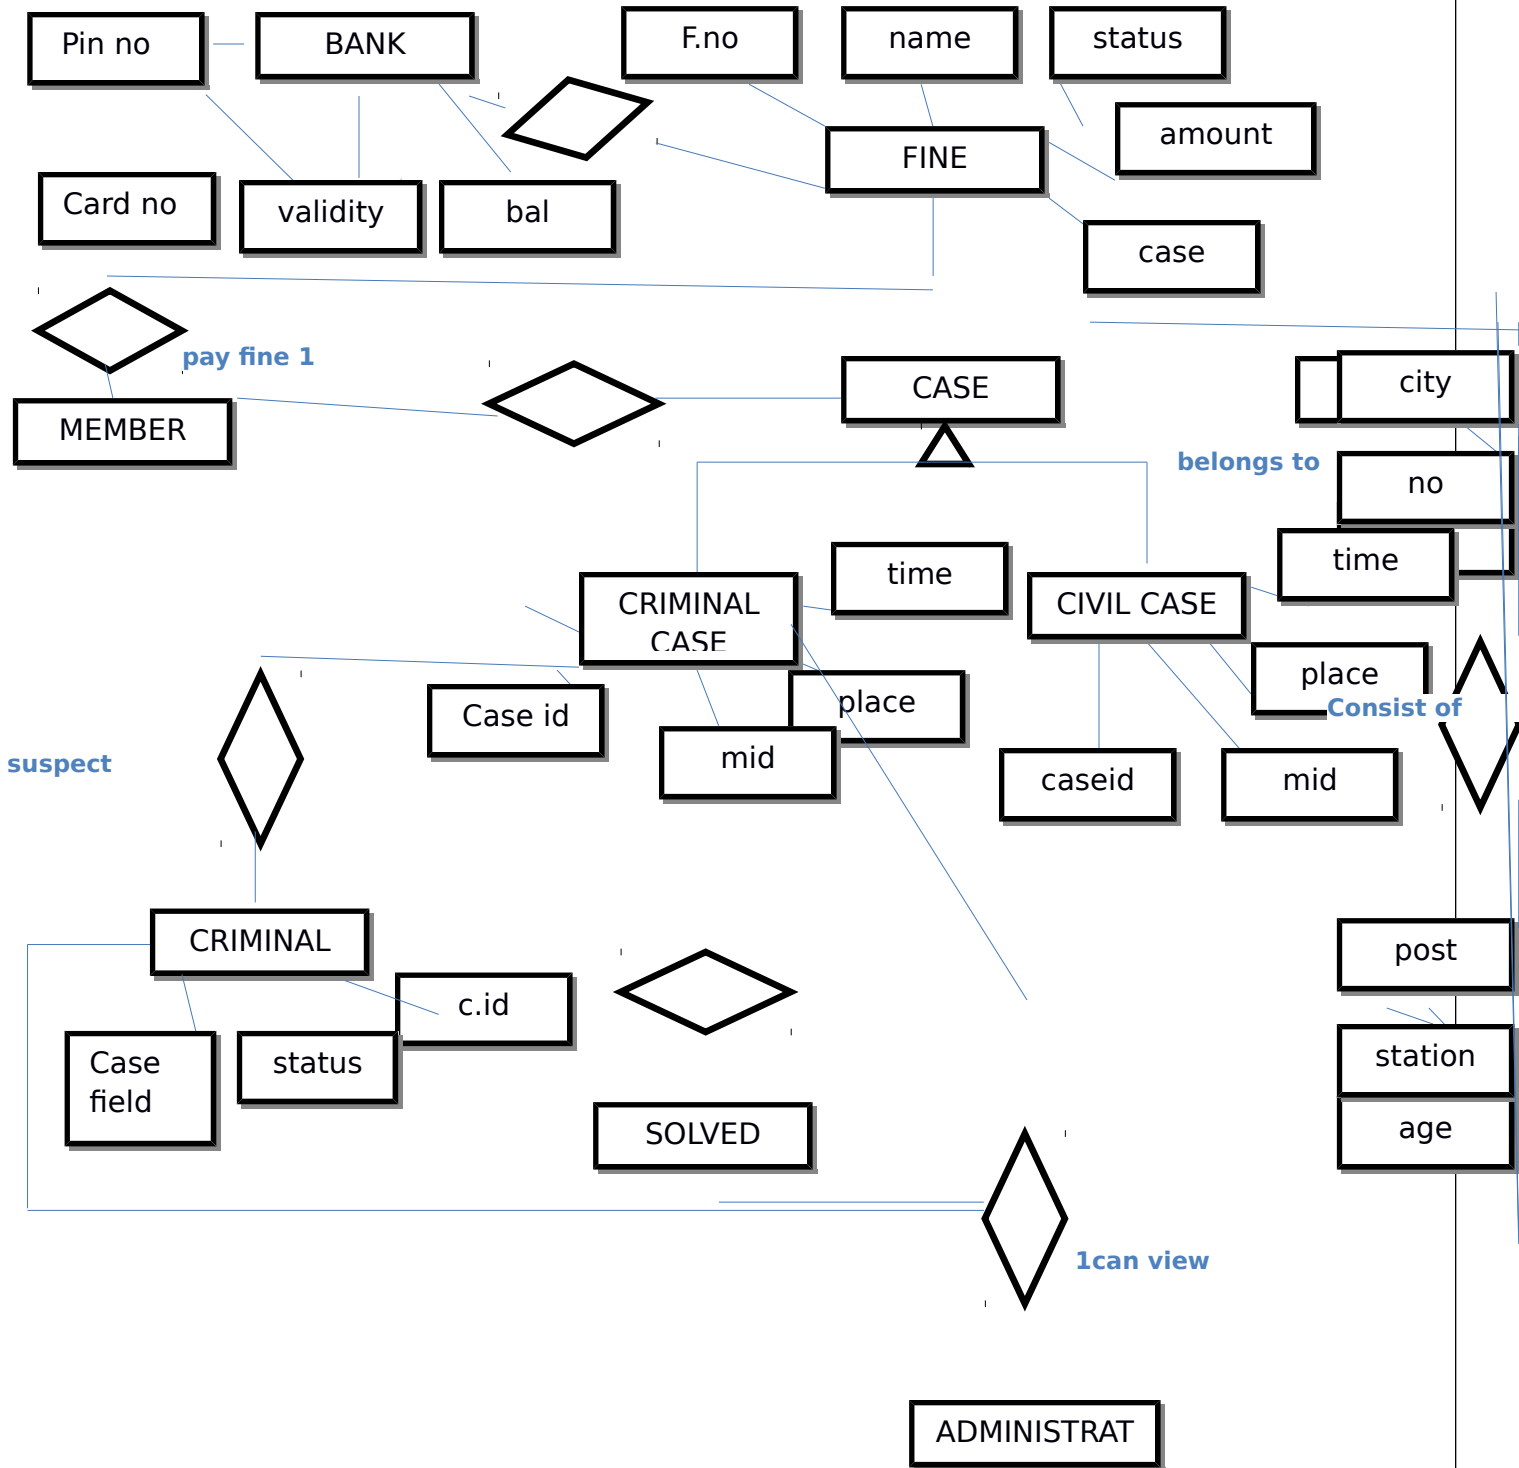

Police official can see the case assigned to them and know the specific details of the case. They can also change the case status as the case is being solved or the file for a particular case is closed. They can also check criminal details with criminal module and make necessary changes into it with time.

### 4. Administrator:

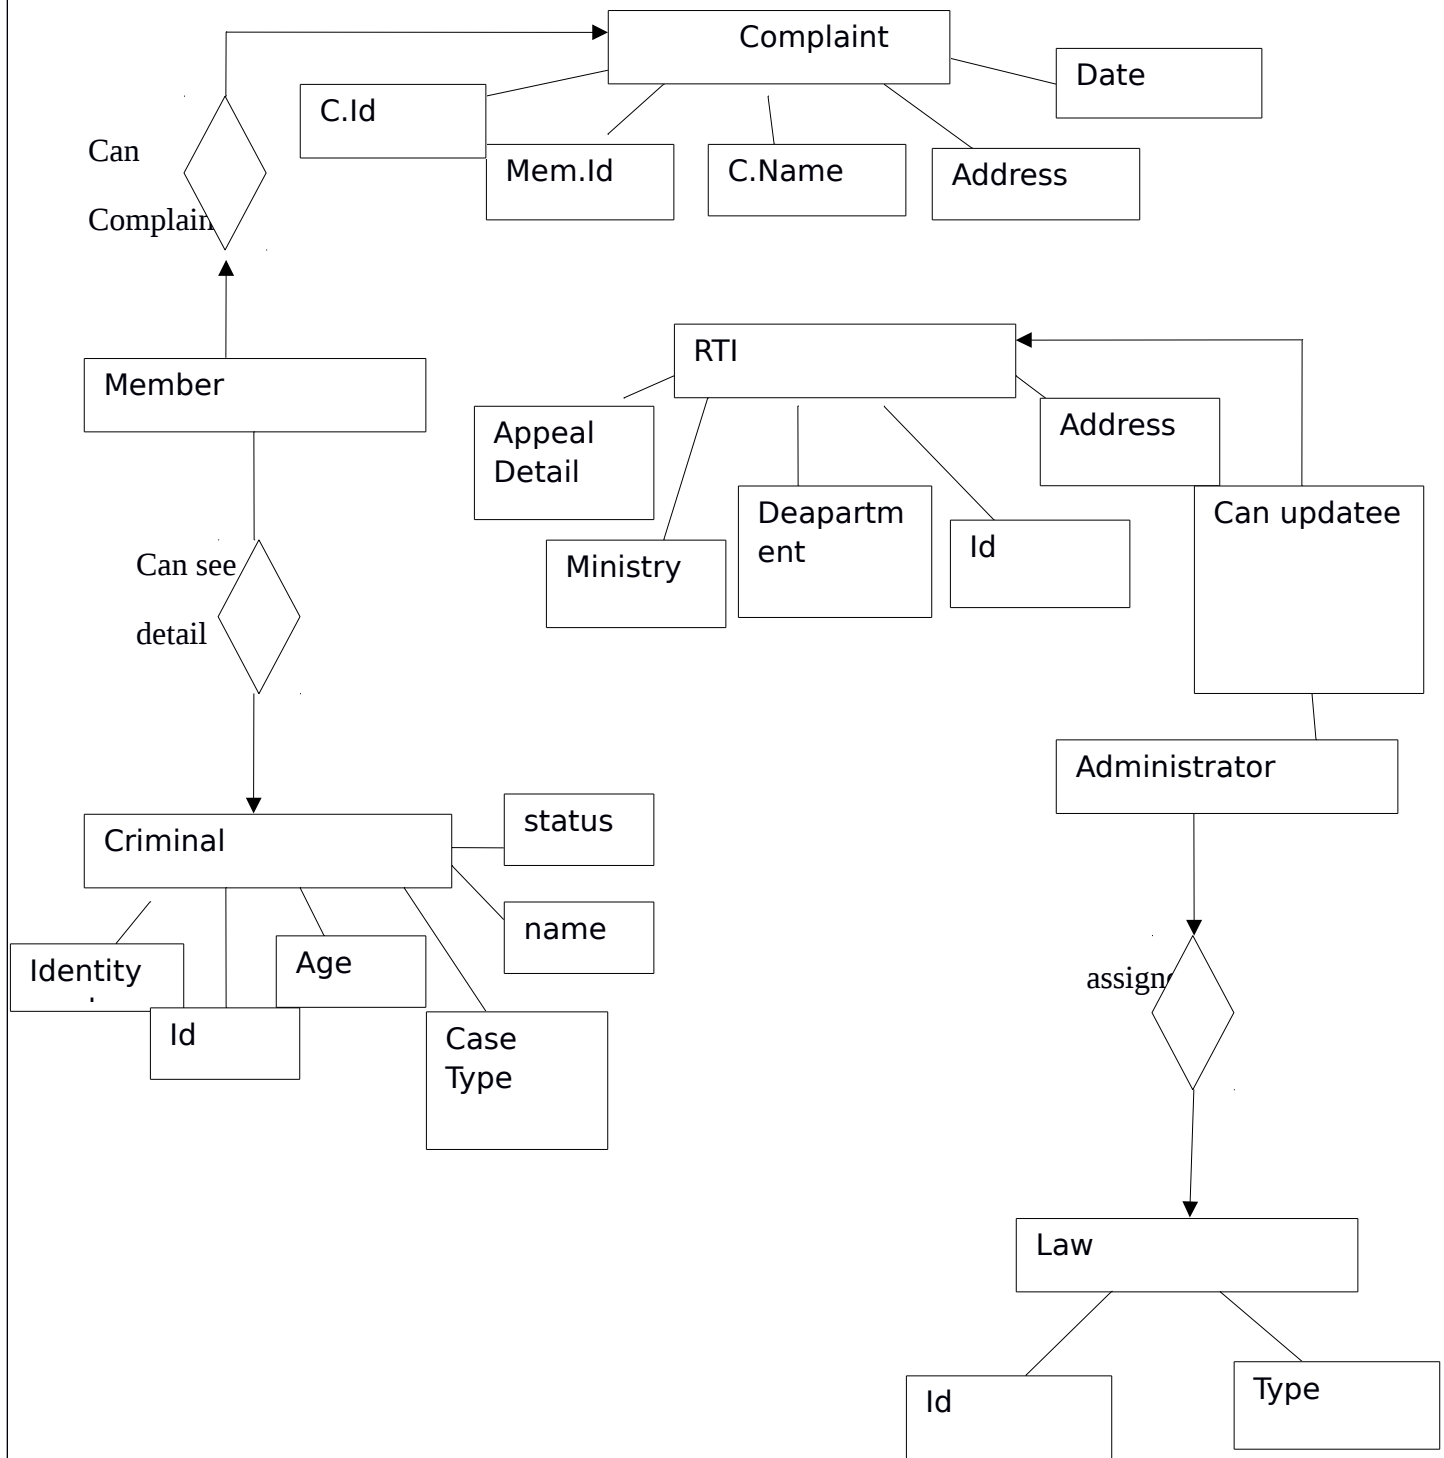

The administrator will have an administrative interface which is a GUI so that he can view the entire system. He will also have a login page where he can enter the login particulars so that he can perform all his actions. This administrative interface provides different environment such that he can maintain database & provide backups for the information in the database. He can register the new officers by providing them with username, password & by creating account in the database.

## Criminal Detail Form

The screenshot shows a web browser window with the title "CRIMINAL DETAILS" in a blue header bar. Below the header is a form with the following fields and options:

Name	<input type="text"/>
Case ID	<input type="text"/>
Case Type	Civil <input type="radio"/> Criminal <input type="radio"/>
Crime Place	<input type="text"/>
City	<input type="text"/>
Gender	Male <input type="radio"/> Female <input type="radio"/>
Nearest Police Station	Babina <input type="text"/>
Identity	<input type="text"/>

The browser's address bar shows the URL "http://localhost:8081/ser/crimdetor.jsp". The taskbar at the bottom shows the time as 14:36 on 24-04-2013.

## Criminal Profile

The screenshot shows a web browser window with the title "CRIMINAL DETAILS" in a green header bar. Below the header is a navigation bar with the following links: Home, About Us, Contact Us, User Login, Admin Login, OfficerLogin, and New User. The main content area displays a list of names and their corresponding criminal IDs:

babu	Criminal id:111
sulli	Criminal id:112
Gagan	Criminal id:801
Gagan	Criminal id:802
Gagan	Criminal id:803
sundar	Criminal id:804

At the bottom left of the list, there is a button labeled "See Profile". The browser's address bar shows the URL "http://localhost:8081/ser/crimuser.jsp". The taskbar at the bottom shows the time as 14:42 on 24-04-2013.

## RTI Appeal Form

The screenshot shows a web browser window with the address bar displaying `http://localhost:8081/ser/appealform.jsp`. The page title is "RTI APPEAL FORM". The form is divided into several sections:

- Ministry Details**: A text input field labeled "Union Ministry".
- Appeal Particulars**: Two text input fields labeled "Title" and "Name". Below these are two radio buttons: "Indian" (selected) and "NRI/Person of Indian Origin".
- Contact details**: Two text input fields labeled "Email Id" and "Mobile No".
- Appeal Details**: A text input field labeled "Are you a senior citizen" with two radio buttons: "Yes" and "No" (selected).

The browser's taskbar at the bottom shows various application icons and the system clock indicating 14:40 on 24-04-2013.

## RTI Acts

The screenshot shows a web browser window with the address bar displaying `http://localhost:8081/ser/rtiact.jsp`. The page title is "Right Act". The content area contains the following text:

**An Act to provide for setting out the practical regime of right to information for citizens to secure access to information under the control of public authorities, in order to promote transparency and accountability in the working of every public authority, the constitution of a Central Information Commission and State Information Commissions and for matters connected therewith or incidental thereto.**

Whereas the Constitution of India has established democratic Republic;

And whereas democracy requires an informed citizenry and transparency of information which are vital to its functioning and also to contain corruption and to hold Governments and their instrumentalities accountable to the governed;

And whereas revelation of information in actual practice is likely to conflict with other public interests including efficient operations of the Governments, optimum use of limited fiscal resources and the preservation of confidentiality of sensitive information;

And whereas it is necessary to harmonise these conflicting interests while preserving the paramount of the democratic ideal;

Now, therefore, it is expedient to provide for furnishing certain information to citizens who desire to have it.

At the bottom of the page, there are two columns of links:

- Chapter 1
- Chapter 2
- Chapter 3
- Chapter 4
- Chapter 5
- Chapter 6

The browser's taskbar at the bottom shows various application icons and the system clock indicating 14:41 on 24-04-2013.

# **TESTING**

One of the main requirements of the software development is to develop bug free reliable system. During the process of development of any application there is always a possibility of some errors being developed. And also the software may not be as user asked for. Thus, it becomes imperative that the software should be checked at every step. This helps in a bug free reliable system. If there is any bug or alteration that have to be made that can be done at the preliminary level as the application gets more complicated after every step.

The objective of the testing is to discover bugs of the application. To fulfill the objective, a series of test steps such as Unit Testing, Validation Testing, System Testing where planned and executed. Testing objective includes

- Testing is a process of executing a program with the intent of finding an error.
- A good test case is one that has a high probability of finding an undiscovered error.
- A successful test is one that uncovers an undiscovered error.

## **Various Testing Approaches**

**1 BLACK BOX TESTING:-**Black Box Testing relates to tests that are performed as the software interface. Although they are designed to identify errors, black box tests are used to demonstrate that software functions are operational, that inputs are correctly accepted and the output is correctly produced.

**2 WHITE BOX TESTING:-**White box testing is test case design approach that employs the control architecture of the procedural design to produce test cases. Test case can be divided such that they :

- Guarantee that all independent paths within a module have been exercised at least once
- Exercise all logical decision on their true and false side.
- Execute all loops at their boundaries and within their operational bounds.
- Exercise internal data structure to insure their validity.

**3 UNIT TESTING:-**This test focuses verification effort on the small unit or design module. Here using test plan prepared in design description as guide, important control paths are tested to uncover errors within boundary of the module.

Boundary condition are tested to ensure module operate properly at boundaries established to limit or restrict processing. All paths in the control structure are exercised to ensure all statements in a module are executed at least once and finally all errors handling paths are tested to see message are intelligent. Corresponds to errors encountered and provide enough description for the cause of errors.

**4 INTEGRATION TESTING:-**The focus of the test here is on, the design and construction of software architecture. This is a systematic technique for construction of the program structure and conducting tests to uncover errors associated with interfacing. The objective here is to take unit tested module and build a program that is dictated by signs. All fractions integrated successfully after successful completion of development and unit testing.

**5 VALIDATION TESTING:-**All the culmination of integration testing ,software completed assembled as a package, interfacing errors have been uncovered and corrected and a final series of software testing, validation test begins.

## **PREVIOUS WORK**

The system is flexible enough to ensure well-coordinated efforts to face the strategic challenges emerging from rapidly changing economic environment and global trends. Till now in our project we have different modules i.e visitor module, member module, officer module and administrator module.

### **VISITOR MODULE**

In this module a visitor can use several services without any kind of login and membership. In this module visitor can visit photo gallery, news section, missing person and found person, and many other services.

### **MEMBER MODULE**

In this module we provide membership to visitor when he creates account on our website. We provide a login ID, with that id member can login and can utilize various services of our website like can FIR, can check FIR status etc.

### **OFFICER MODULE**

In this module officers are provided with an ID ,with the help of that ID they can login and can perform various operations. With this module officers can check case details, can change case status i.e solved or unsolved and many other services..

### **ADMINISTRATOR MODULE**

In this module administrator can perform various activities such as can register new officer, can assign a case to different officer ,can view all details of cases etc.

In previous semester we have completed these four modules in our project.
